

Possible Ideas

- Odd job web app/android app - maybe (3)
- **Task management System w/ collaboration features**
- Parking Spot Availability Vision Model (any object, maybe chairs) - ruled out
- Ratemyprofessor style site - better system with more functionality
- Recipe website trimmer to get just the recipe/meal prep website
- **Recipe forum w/ review and rankings**

1) Recipe forum w/ review and rankings

- Upload and view recipes
- Save and view later
- rating/review system
- Sort by different metrics + search
- Log traffic on each to recommend
- Enter ingredients you have and get matching recipes

Backend: Node JS

Frontend: React

Database in cloud? - Google or Azure

2) Task management System w/ collaboration features

- Create and view tasks
- User profiles, able to join different groups
- Able to share tasks with other users
- Real-time updates
- Website

Odd job web app/android app
